Classified Contents

Action of hydrogen peroxide on the acids obtained by the controlled oxidation of bituminous coal, 400
Active hydrogens in coal, 254
Analysis of liquid products from coal hydrogenation by mass spectrometry. Use of rhenium filaments and low ionizing voltage, 315
Aromaticity of coal—an appraisal, 115
— ultra-violet–visible spectrum and the, 369

Behaviour of individual macerals and blends in the Audibert–Arnu dilatometer, 165
Bituminous coal, irradiation of oxidation products of a, 38

Calculation of the molecular volumes of the liquid forms of polycyclic aromatic and perhydroaromatic hydrocarbons, 119
Carbon dioxide, diffusion of, from coal, 333
Carbon formation from acetylene, effect of Ferrocene on, 329
Characterization of pitches for carbon anodes, 183
Chemical constitution of coal VI—optimum conditions for the preparation of sub-humic acids from humic acid by ozonization, 79
Chemical structure of coal (1), 245
— (2), 248
Chemical structure and properties of coal XXI—the kinetics of coal carbonization, 17
— XXII—behaviour of individual macerals and blends in the Audibert–Arnu dilatometer, 165
— XXIII—electron-spin resonance of vitrains, 355
— XXIV—sound velocity and fraction of aromatic carbon, 483
Chlorination of low rank coals with (*a*) sulphuryl chloride, and (*b*) hydrogen peroxide–hydrochloric acid, 147
Chloroform solubility and coking properties of coals treated with hydrogen, 252
Coal, dependence of the elastic behaviour of, on the microcrack structure, 125
— extraction experiments on, with various bases, 291
— microscopic studies of rate of thermal decomposition of petrographic components of, 205
— studies on oxidation of, at lower temperatures, 211
Coals, chlorination of low rank, with (*a*) sulphuryl chloride, and (*b*) hydrogen peroxide–hydrochloric acid, 147
Coke oven tar, structure of, 445
Conditions for the combustion of solid and liquid fuels, 189

Dehydrogenation and aromaticity of coal, 256
Dehydrogenation of coal and tar formation, 112
Dependence of the elastic behaviour of coal on the microcrack structure, 125
Determination of active hydrogen in coal by deuterium exchange, 537
Determination of calorific value of gases: miscellaneous, 339
Determination of hydroxyl groups in model compounds, coal and coal extracts, 283
Determination of phosphorus in coal ash, 277
Determination of pyritic sulphur in coal, modification of Mott's method for, 425
Determination of total mineral-matter content in Australian coals, 295
Diffusion of carbon dioxide from coal, 333
Diffusion of gases through coal, 403

Effect of Ferrocene on carbon formation from acetylene, 329
Electrolysis of solvent extracts of a coal, electron resonance study of free radicals produced by, 309
Electronic absorption and the energy gap in bituminous vitrain, 541
Electron resonance study of free radicals produced by electrolysis of solvent extracts of a coal, 309
Electron-spin resonance of vitrains, 355
Extraction experiments on coal with various pyridine bases, 291

Further studies on the mechanism of oxidation of coal, 469

Hydrogasification of bituminous sand to ethane and to pipeline gas, 250
Hydrogenation products from bituminous coal and sucrose at elevated temperatures: spectral comparisons, 8
Hydroxyl groups, determination of, in model compounds, coal and coal extracts, 283

Infra-red spectra of coals and some coal derivatives, 114, 399
Infra-red spectra of solvent extracts of coals, 55
Inorganic constituents in Australian coals I —direct determination of total mineral-matter content, 295
Interpretation of the intensities of x-rays scattered by coals, 64
Irradiation of oxidation products of a bituminous coal, 38

Kinetics of coal carbonization, 17
Kinetics of the sorption of methanol on cellulose, 259

Methanol, kinetics of the sorption of, on cellulose, 259
Microscopic studies of rate of thermal decomposition of petrographic components of coal, 205
Modification of Mott's method for the determination of pyritic sulphur in coal, 425

Note on constant volume coal sampling, 122
Note on the relation of specific volume of coals to their hydrogen and oxygen contents, 495

Obituary: Dr Clarence A. Seyler, 523
— Dr Marie Stopes, 104
Optimum conditions for the preparation of sub-humic acids from humic acids by ozonization, 79
Overseas correspondents' notes, 106, 233
Oxidation of coal, further studies on the mechanism of, 469

Phosphorus, determination of, in coal ash, 277
Polar vapours, sorption of, on swelling gels, 271
Pitches, characterization of, for carbon anodes, 183
Polyhydric phenols, quantitative determination of some, 489
Proton magnetic resonance of vitrains at 77·2°K, 539
Pulverized coals, separability of pyrite particles in some, 419
Pyrolysis of coal I—thermal cracking of phenolformaldehyde resins taken as coal models, 429

Quantitative determination of some polyhydric phenols, 489

Recent developments and notes, 88, 217, 381, 506

Science in the use of coal—a review, 259
Separability of pyrite particles in some pulverized coals, 419
Solvent extraction of a low rank vitrain, 45
Solvent extracts of coals, infra-red spectra of, 55
Some observations on the specific surface of coals, 501
Sorption of polar vapours on swelling gels, 271
Sound velocity and fraction of aromatic carbon, 483
Specific surface of coals, some observations on the, 501
Specific volume of coals, note on relation of, to their hydrogen and oxygen contents, 495
Spectral comparisons of hydrogenation products from bituminous coal and sucrose at elevated temperatures, 8
Structure of coke oven tar, 445
Studies in bomb calorimetry X—conditions for the combustion of solid and liquid fuels, 189
— XI—determination of calorific value of gases: miscellaneous, 339
Studies on oxidation of coal at lower temperatures, 211

Thermal cracking of phenolformaldehyde resins taken as coal models, 429

Ultra-violet–visible spectrum and the aromaticity of coal, 369
Use of rhenium filaments and low ionizing voltage in analysis of liquid products from coal hydrogenation by mass spectrometry, 315

Variability of vitrinites in British coal seams, 155
Variation with temperature of the catalytic activity of an oxidized stainless steel surface in the oxidation of sulphur dioxide, 257
Verification of the H/C vs M_C/d diagram, 535
Vitrain, solvent extraction of a low rank, 45
Vitrinites, variability of, in British coal seams, 155
Volatile residue in coal analysis, 543

X-Rays scattered by coals, interpretation of the intensities of, 64

PAPERS ACCEPTED FOR FUTURE PUBLICATION

The following papers have been accepted for publication in future issues of FUEL

THE FORMATION OF INSOLUBLE MATERIAL DURING THE DISTILLATION OF TAR. *J. W. Smith and E. J. Greenhow*

THE PRECISION OF WEIGHING DEVICES USED IN FUEL ANALYSIS. *D. H. Ward*

CHEMICAL STRUCTURE AND PROPERTIES OF COAL XXV—THE CARBONIZATION OF COAL MODELS. *P. M. J. Wolfs, D. W. van Krevelen and H. I. Waterman*

A STUDY OF COAL BY MASS SPECTROMETRY. *H. W. Holden and J. C. Robb*

MECHANISMS OF COAL PYROLYSIS I—ON THE NATURE AND KINETICS OF DEVOLATILIZATION. *N. Berkowitz*

THE INORGANIC CONSTITUENTS IN AUSTRALIAN COALS II—COMBINED ACID-DIGESTION–LOW-TEMPERATURE OXIDATION PROCEDURE FOR DETERMINATION OF TOTAL MINERAL-MATTER CONTENT, WATER OF HYDRATION OF SILICATE MINERALS AND COMPOSITION OF CARBONATE MINERALS. *H. R. Brown, R. A. Durie and H. N. S. Schafer*

SOME PHYSICAL AND CHEMICAL PROPERTIES OF VITRAINS ASSOCIATED WITH URANIUM. *S. Ergun, W. F. Donaldson and I. A. Breger*

MECHANISMS OF COAL PYROLYSIS II—THE EFFECT OF NITRIC OXIDE ON RATES OF DEVOLATILIZATION. *W. den Hertog and N. Berkowitz*

A STUDY OF THE HYDROGEN DISTRIBUTION IN COAL-LIKE MATERIALS BY HIGH-RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY I—THE MEASUREMENT AND INTERPRETATION OF THE SPECTRA. *J. K. Brown, W. R. Ladner and N. Sheppard*

A STUDY OF THE HYDROGEN DISTRIBUTION IN COAL-LIKE MATERIALS BY HIGH-RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY II—A COMPARISON WITH INFRA-RED MEASUREMENT AND THE CONVERSION TO CARBON STRUCTURE. *J. K. Brown and W. R. Ladner*

ESTIMATION OF THE VOLATILE MATTER OF PURE COAL SUBSTANCE. *L. H. Leighton and R. C. Tomlinson*

THE DISTRIBUTION OF HYDROGEN IN COALS AND ITS RELATION TO COAL STRUCTURE. *P. H. Given*

EXPERIMENTS IN PHYSICAL METAMORPHISM OF BROWN COALS. *J. A. Dulhunty*

LIQUIDS AND LIQUID MIXTURES

By Dr. J. S. ROWLINSON, *University of Manchester.* **Price 75s.**

Primarily for chemists and physicists, this work provides a collective treatment of both the theory and practice of the study of liquid mixtures and of liquids. The whole book has formed the basis of two advance courses for graduates in industry while the experimental parts, suitably trimmed, have been taught to honours and graduate students. The book will be of much interest too, to chemical engineers requiring a summary of our present knowledge of liquids and of the interpretation of their properties in terms of the intermolecular forces.

MODERN ASPECTS OF ELECTROCHEMISTRY No. 2

Edited by Professor J. O'M. BOCKRIS, *University of Pennsylvania.* **Price 75s.**

The "Modern Aspects" volumes review outstanding trends in the recent and rapid growth of our knowledge of electrochemical problems. Volume 2, just published, deals with the field of interionic attraction in solution, in which recent significant progress towards the theory of concentrated solutions has aroused new interest. Ion exchange, a field of considerable practical significance, has a largely electrochemical basis, the outlines of which appear to be now solid enough to justify their representation. Molten electrolytes, the mechanism of anodic processes at electrodes, and the semiconductor–solution interface are also critically reviewed and discussed.

SEVENTH SYMPOSIUM (INTERNATIONAL) ON COMBUSTION, London & Oxford 1958

Edited by THE COMBUSTION INSTITUTE **Price £11 4s. 0d.**

This 1,000-page volume is a record of the papers and discussions of the first International Symposium on Combustion to be held outside the U.S.A. The 124 papers provide much really new information on the rapidly developing facets of combustion theory and practice, covering: Mechanisms of Combustion Reactions; Spectroscopy of Flames; Ionization in Flames; Structure and Propagation of Flames; Ignition and Limits of Inflammability; Interaction of Flames and Surfaces, Turbulence in Flames; Combustion in Practical Flowing Systems; Detonation and its Initiation; Special Fuels; Instrumentation in Combustion Research.

CHEMICAL PROCESSING OF NUCLEAR FUELS

By Dr. F. S. MARTIN, *U.K.A.E.A., Harwell,* and Dr. G. L. MILES, *Australian A.E.C.* **Price 40s.**

A thorough introduction to the problems of chemical processing of the fuel after it has been irradiated in a reactor. Intended primarily for science and engineering graduates who have some acquaintance with nuclear reactor development and are interested in the role of nuclear fuel processing in nuclear systems.

APPLIED HYDRODYNAMICS

By Professor H. R. VALLENTINE, *University of New South Wales.* **Price 50s.**

For use in universities as an introduction to Hydrodynamics for students of Applied Mathematics, and as a course in Fluid Dynamics for senior and post-graduate students in Civil, Mechanical and Aeronautical Engineering. It has a bias towards practical application differing from those established hydrodynamic works which are essentially mathematical treatises.

BUTTERWORTHS SCIENTIFIC PUBLICATIONS

5391 **4 & 5 Bell Yard, London W.C.2**

PRINTED IN GREAT BRITAIN BY PAGE BROS. (NORWICH) LTD., NORWICH. PUBLISHED BY BUTTERWORTHS PUBLICATIONS LIMITED, FOR BUTTERWORTHS TECHNICAL BOOKS LIMITED, 88 KINGSWAY, LONDON, W.C.2 U.S.A. DISTRIBUTORS: INTERSCIENCE PUBLISHERS INC. 250 FIFTH AVENUE, NEW YORK 1, N.Y
